## STC Supports Disaster Relief in the Wake of Hurricane Irene

STC, the largest public health IT firm in the country specializing in immunization management solutions, has extended a helping hand to the east coast in the aftermath of Hurricane Irene. As the hurricane rapidly approached landfall on the east coast, STC realized the importance of tracking and accessing immunization records. This is why we offered our Standalone Mass Immunization Module to all of the states on the east coast, free of charge.

The Standalone Mass Immunization Module allows the collection of patient data and administered vaccinations remotely and without internet access. The Module can be loaded on a thumb drive and used in combination with a laptop at evacuation sites and remote health clinics. Once the immunization event is complete, the data is exportable to a state's immunization registry.

In addition to donating the Standalone Mass Immunization Module, STC has offered our Help Desk support and services during this difficult time. STC has extensive experience in disaster support related to immunizations and looks forward to working with the states affected by Hurricane Irene during this difficult time.

If you would like to learn more about STC's disaster relief efforts, please contact Todd Commyn at 520.202.3333 or [todd\\_commyn@stchome.com](mailto:todd_commyn@stchome.com)
