### FEATURES

Dynamic, configurable and interactive form builder.

Interoperability with state electronic disease surveillance systems (EDSS).

Standard set of CDC outbreak forms.

Rules-based data access repository.

Integrated suite of statistical, mapping and analytical tools (e.g., EpiInfo, SAS, ESRI).

Standard S.O.A.P. design and tools.

### VALUE

Real time questionnaire creation and/or modification to support emerging or unknown disease investigations.

Provides easy-to-use tools and the ability to transfer cases to state EDSS. Increases user's ability to minimize the impact of an outbreak on a community.

Integrated set of standard forms can be selected and/or modified in support of an outbreak investigation and data portability.

Data accessible to authorized users - HIPPA compliant.

Supports exchange of data for analysis reporting and outbreak identification.

Cost-effective, ease of maintenance, reliable, and secure.
