

Increasingly, public health agencies at every level are relied upon to prepare for and respond to an expanding scope of emergencies. Often neglected are existing data systems that can fulfill critical needs during an emergency event. STC provides comprehensive professional services to support regional, state, and local IT and data systems planning, exercises and drills.

➔ Planning

Collaborating with public health agencies and stakeholders, STC can help design or review preparedness plans and procedures, evaluate IT solutions supporting readiness and response, and create strategic planning guidance for leveraging existing information systems to support emergency preparedness.

➔ Exercises and Drills

“Tabletop” exercises assist in developing response strategies and tactics. Functional or “field” exercises and drills test procedures and evaluate response activities. STC supports such simulations at the agency, local, and state public health system levels. In addition, STC expertise enables public health agencies to design and deliver their own exercises while integrating the roles and responsibilities of partner agencies.

➔ Readiness for:

- Pandemic influenza.
- Strategic National Stockpile (SNS).
- Mass immunization clinics.
- Evacuation and displaced populations.
- Multi-jurisdictional disease outbreak response.

➔ Preparation through:

- Operational and strategic plans and procedures design.
- Exercise/drill planning, evaluation, and instruction.
- IT systems simulations in support of exercises and drills.
- Rapid Health Information Exchange.
