

Immunization Management System

Advancing Public Health Outcomes Through Information Technology

STC began the development of our Immunization Management System (IMS) in 1993, a suite of tools that has grown into the most cost effective and efficient immunization registry in the United States. The product line, along with various components, is installed in nearly 20% of state health departments.

The STC IMS is a fully functional, easy-to-use system that can be configured and customized to support statewide, regional, and/or individual physician office registry needs. The product line supports current CDC NCIRD and PHIN initiatives and is available through STC's GSA schedule.

Features of the system include:

- ➔ User-friendly interface.
- ➔ Forecasting that includes ACIP-recommended and accelerated schedules.
- ➔ Reminder/Recall with labels, postcards, and auto-dialer text files.
- ➔ Probabilistic de-duplication.
- ➔ Automated and manual record merging.
- ➔ Over 500 report options.
- ➔ Advanced inventory distribution and management tools.
- ➔ Web-based Geographic Information System (GIS) application.
- ➔ Electronic data exchange capabilities including HL7.
- ➔ Integration with other public health datasets, such as Lead and Newborn Screening.

Current STC clients include the states of Alaska, Arizona, Idaho, Indiana, Louisiana, Maryland, Mississippi, Washington, West Virginia, and Wyoming
