

Sentinel, the Scientific Technologies Corporation (STC) disease surveillance software solution, is a comprehensive case management tool that provides extended disease reporting capabilities to allow National Electronic Telecommunications System for Surveillance (NETSS) export files to be generated for CDC reporting. Sentinel also provides electronic laboratory reporting. Additional Sentinel functionality includes:

- ➔ Automatic case assignment.
- ➔ Complex analysis, visual, and reporting.
- ➔ System audit log.
- ➔ Contact tracing to allow creating and managing disease contacts.
- ➔ Alerts and Notifications.
- ➔ Complex security model that allows data access by user roles and jurisdiction.
